## [#WorldWaterDay2022](#) [2]

World Water Day celebrates water and raises awareness of the 2.2 billion people living without access to safe water. It is about taking action to tackle the global water crisis and achieving Sustainable Development Goal 6: water and sanitation for all by 2030. UTaNRMP is proud to be part of this year's theme of ?Groundwater: Making the invisible visible ? through its various interventions on spring protection and development as well as rehabilitation of boreholes and shallow wells.
